

Your Trusted Home Services Marketplace

PREPARED BY
HomeServe MVP Development Team

The Challenge & Our Solution

Bridging the gap between homeowners and service specialists

The Problem

Finding reliable, local home service providers in urban hubs is highly fragmented, unverified, and risky.

- **Fragmented Discovery**

No unified registry for verified on-demand experts.

- **No Pricing Transparency**

Estimates are arbitrary, leading to unfair pricing or hidden costs.

- **Risk & Trust Issues**

Lack of background checks, portfolio proof, and genuine reviews.

The Solution

HomeServe connects homeowners with verified local service providers through a seamless, mobile-first marketplace.

- ✓ **Verified Professionals**

Complete with portfolio showcases and rating metrics.

- ✓ **Transparent Pricing**

Clear upfront baseline charges & instant digital estimates.

- ✓ **Real-time Booking**

Instant scheduler tracking, availability indicators, & status updates.

The Team & 5–Day Sprint Plan

High-velocity MVP execution from zero to full integration

Saidul Islam
Project Lead & Flutter Developer

Built cross-platform Flutter client & E2E state synchronization.

Rabbi
Backend Developer

Implemented FastAPI server, MySQL models, & OTP authorization endpoints.

Sajib
Architecture Designer

Crafted relational DB schemas, Figma layouts, & visual UX/UI state paths.

5–DAY MVP SPRINT TIMELINE

Sept 15 – Sept 19, 2026

DAY 1
Foundation
DB Schema & Setup

→ **DAY 2**
Auth E2E
Phone OTP Mock

→ **DAY 3**
Core Booking
List & Flow Setup

→ **DAY 4**
Reviews
Approval & Ratings

→ **DAY 5**
Integration
Final Test & Release

Product MVP Scope

Rigorous feature prioritizing during our fast-paced design phase

Release 1 — In Scope (Sprint 1)

DELIVERED

- ✓ **Registration & Login**
Secure mock phone validation with temporary OTP override.
- ✓ **Provider Profiles & Approvals**
Specialist profiles verified by system administrators.
- ✓ **Category Browse & Advanced Filters**
Filter lists based on distance, ratings, and instant availability.
- ✓ **E2E Booking & Status Tracker**
Complete state tracking from reservation to job closure.
- ✓ **Ratings & Service Reviews**
Transparent review accumulation system with real stats.

Deferred to Sprint 2

BACKLOG

- 🕒 **Real SMS Gateway integration**
AWS SNS / Twilio integration for real phone number validation.
- 🕒 **In-App Live Chat**
Real-time communication via WebSockets.
- 🕒 **Live GPS tracking map**
Real-time tracking of technicians as they travel.
- 🕒 **Financial Earnings Dashboard**
Detailed payment analytics for service providers.
- 🕒 **Automated Dispute Resolution**
Ticketing panel for booking escalations.

Mobile Provider Discovery Flow

High-fidelity interactive prototype layouts designed in Figma

Category List

Discover services by specialized industries

Provider Results with Filters

Compare ratings, distances, and prices

Filter & Sort Modal

Fine-tune estimates & emergency tags

Empty State

Suggests alternative slots & nearby options

Seamless Booking Experience

High-fidelity on-demand booking loop engineered for user speed and transparency

The Provider Ecosystem

Comprehensive credential verification and multi-sided quality guardrails

Provider Profile

Portfolio display, live status badge, categorized star review system

Setup & Skill Set

Multi-select specialty grid & upload port for job portfolio photos

Admin Control

FastAPI driven pending review and credential verification status

VERIFIED

Specialist Badge

Verified status with police background checking

RATINGS

Aggregate Reviews

Client review submissions generate transparent

PORTFOLIO

Finished Job Proof

Providers showcase prior electrical installations or AC se

OPS FLOW

Admin Oversight

Operations team acts as quality gatekeeper, manually va

Robust & Lightweight Architecture

Clean decoupling of cross-platform frontend and stateless REST API components

CLIENT Frontend Stack

- **Flutter Cross-Platform**

Single dart codebase powering high-fidelity UI compilation for iOS, Android, and Web clients.

- **Riverpod State Management**

Global caching and reactive asynchronous state providers to cleanly decouple UI from requests.

- **GoRouter Navigation**

Declarative path-based URL routing facilitating fluid view transitions and deep link logic.

API LAYER Backend Stack

- **FastAPI Python Framework**

Asynchronous ASGI framework compiling Pydantic validators for instant automated doc generation.

- **SQL Relational Schema**

Hosted MySQL database mapping robust relationships between users, bookings, and verified pros.

- **JWT Capability Security**

Stateless HTTP Bearer authorization tokens handling authenticated REST endpoints safely.

INFRA Infrastructure

- **Mock OTP Verification**

Safe testing simulation bypassing SMS gateway costs with temporary administrative passcodes.

- **5s Polling Mechanism**

Reliable fallback loops mimicking socket handshakes for immediate booking updates.

- **Secure Device Cache**

Encrypted keychains on device to safely persist auth tokens using Flutter Secure Storage.

Thank You

HomeServe v0.1–MVP — Ready for Live Demonstration

Questions? Let's Demo!

Launch Demo →

Secure Authentication Flow

Decoupled state management & modern mobile security paradigms

JWT–Capability Authorization Model

- ✓ **Phone Registration & Profile Setup**
Enrolls basic user metadata with name, gender, and regional preference identifiers.
- ✓ **Mock OTP Verification**
Production-ready client handlers structured to transition seamlessly to real SMS verification gateways.
- ✓ **JWT Capability tokens**
Stateless session tags carrying distinct client, provider, and admin capability flags.
- ✓ **Secure Device Cache**
Tokens are persisted locally using platform-specific Flutter Secure Storage implementations.

Onboarding UI Showcase

Registration
Basic data collection

OTP Verification
6–digit temporary override

Login
Secure credentials access

Profile & Account Management

Intuitive control centers for both clients and specialized providers

My Profile

Unified client directory, saved addresses, and comprehensive transaction receipts.

Edit Profile

Update operational details, credentials, and modify account security metrics.

Provider Setup

Define work skills, upload certifications, and build a beautiful portfolio view.

Log Out Dialog

Securely clear cached session tokens upon explicit user session end actions.

5-Day Sprint Breakdown

Accelerated MVP development roadmap with granular daily milestones

DAY 1
Foundation

- ER Diagram**
Database schema definition
- UX Wireframes**
Screen flows finalized
- API Contract**
FastAPI REST schemas

DAY 2
Auth E2E

- OTP API**
FastAPI verification route
- Final Figma**
Complete component system
- Auth Screens**
Flutter UI login setup

DAY 3
Core Booking

- Provider Lists**
Specialist fetching routing
- Browse UI**
Active filter chips row
- Booking Flow**
Interactive schedulers

DAY 4
Admin & Feed

- Ratings System**
Service feedback accumulation
- Admin Portal**
Provider review dashboards
- State Polling**
5s client fetch fallback

DAY 5
Launch

- E2E Tests**
Full flow synchronization
- Flutter Build**
Deployable Android client
- Release v0.1**
MVP live demonstration

Key Metrics & Team Success

Velocity and deliverables of the initial 5-day MVP sprint

24

Screens Designed

High-fidelity Figma prototypes mapped E2E.

15+

API Endpoints

Fully documented FastAPI REST architecture.

3

Team Members

Engineers working in synchronized parallel sprints.

5 Days

Zero to Demo

Rapid, high-fidelity deployment with zero downtime.

2

Platforms Enabled

Single Flutter codebase natively rendering Android & Web.

v0.1

MVP Release

Stable functional system ready for live demonstration.

"From concept to working product in under a week — architecture-first, quality-driven."

Strategic Roadmap — Sprint 2 & Beyond

Structured plan to scale infrastructure, boost user engagement and integrate payments

Phase 1

SPRINT 2

- **AWS SMS Gateway**

Transition from mock codes to active OTP phone validation.

- **Live WebSocket Chat**

Provide seamless communication channels between parties.

- **Real-time GPS Tracker**

Enable live technician location sharing during transit.

Phase 2

MONTH 2

- **Provider Dashboard**

Detailed analytics mapping earnings, jobs, and client feedback.

- **Secure Two-Factor Auth**

Deploy robust security procedures for user profiles.

- **Dispute Resolutions**

Standard ticketing portal facilitating booking escalations.

Phase 3

MONTH 3+

- **Payment Gateways**

Direct client billing and automated provider split payout rules.

- **Advanced Calendars**

Manage availability dynamically with instant automated holds.

- **Push Notifications**

Keep users updated instantly on service requests and completions.
